December 10, 2019

To Whom It May Concern:

I'm a Senior Software Engineering Student from Mexico, with years of real-world professional experience. Open Source contributor to projects like webpack, with millions of weekly downloads on npm.

I started programming at age 13 and quickly developed a passion for it, after school I would get online to learn and code as much as possible. By 15 I've taken an interest on web development and sold a couple of static sites. At age 17 I got my first job, as the sole developer for a dynamic website at one of the biggest construction companies in Mexico, Chufani. The project was a web portal for thousands of suppliers to consult on their invoices, with little previous knowledge of technologies like SQL and PHP it sure was challenging, but shipped successfully, soon the scope grew as the company constantly requested more features for internal affairs like financial reports and documents management.

In the five years since, I worked a lot with technologies like Python, Django, React.js, Node.js, GIT and Ubuntu Server, to deliver value on projects like "Internet of Things Web Platform" at TImobile, or "Customer Order Portal" for Genus PIC (world leader of pork genetics).

I'm passionate about Open Source and as such, contributed to several projects on github like typicode/Hotel, gpbl/react-day-picker and webpack/webpack.

For years it has been a dream of mine to work at a Silicon Valley company, that's why the idea of this internship really excites me, I want to learn firsthand how you build and ship software. With my skillset I'll be a valuable asset during this time.

Please review my resume, which provides more details on my work, skills and open source contributions, also feel free to look at my portfolio and github profile.

Thank you for your time. I look forward to hearing from you.

Alejandro Madariaga
